AIRLINK 101

Model # ATVUSB05

User's Manual

VER. 1A

Table of Contents

CHAPTER 1 INSTALLING HARDWARE

1.1 Package Contents

Unpack your Airlink101 TV box and make sure that all the items are intact. The following items should be included in your package:

- Airlink101 TV box
- Audio Cable
- Composite to S-Video Converter Cable
- Power Adapter
- Quick Installation Guide
- Installation CD
- Remote Control [requires two AAA batteries (not included)]

1.2 Minimum System Requirements

- Intel Pentium 4 2.0GHz or above CPU
- 256 MB RAM
- 200 MB available hard disk space
- One available USB port (USB 2.0 recommended)
- Microsoft Windows 2000/XP
- VGA with 800x600 16-bit resolution (DirectX 9 supported)
- AC 97 compatible sound card
- Speakers for audio output
- CD-ROM drive

## 1.3 Upgrading USB 2.0 Host Controller Driver

Before you plug the Airlink101 video capture adapter into your computer's USB 2.0 port, please check your USB 2.0 device driver first. If your USB 2.0 host controller driver is not the latest version or provided by Microsoft, we strongly recommend you use our "USB 2.0 Updater" utility from the autorun page on the CD. It will help you to upgrade your USB 2.0 driver to the latest version released by Microsoft in order to avoid some compatibility issues.

Note: DO NOT connect the Airlink101 TV box to your computer when you are using the USB update utility.

1.4 Hardware Installation

After you have updated the USB 2.0 host controller driver to the latest version, you can install the Airlink101 TV box. Please refer to the diagram below as you follow the installation procedures.

Note: Be sure to follow the steps carefully and **plug in the USB 2.0 connector last**.

1. Connect the coaxial cable for the TV antenna/cable to the **TV** port of the TV box.
2. Connect the S-Video cable from you video source to the **S-Video** port of the TV box. If you don't have an S-Video cable, use the provided **Composite to S-Video converter cable**.
3. Connect the audio cable from your audio source to the **AUD-IN** port of the TV box.
4. Connect one end of the provided Audio Cable to the **AUD-OUT** port of the TV box and connect the other end to the **Line In** port of your sound card.
5. Connect one end of the power adapter to the **Power Adapter** port of the TV box and connect the other end to an electrical outlet.
6. Connect the **USB 2.0 connector** from the TV box to an USB 2.0 port on your computer.

CHAPTER 2 INSTALLING Airlink101 TV BOX DRIVER

Before installation, it is highly recommended that all background applications such as antivirus software and system monitoring programs be disabled first.

1. When you plug in the USB 2.0 connector to the USB 2.0 port of your computer, the **Found New Hardware Wizard** will appear. Click **Cancel** to quit the wizard and insert the provided Installation CD.

2. The setup menu will automatically appear. Select **Driver Install** to start the driver
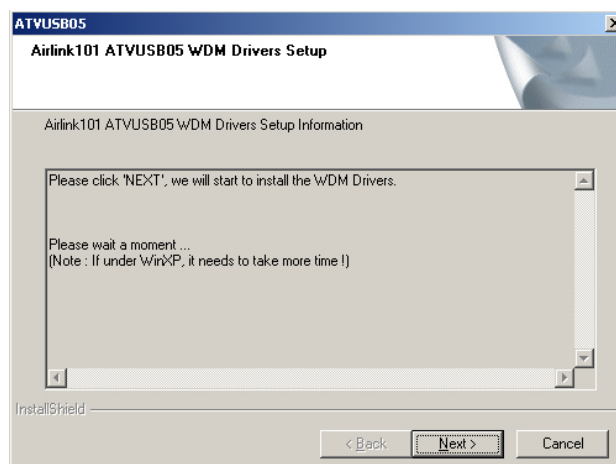

installation.
Note: If the setup menu does not appear automatically, go to **Start**, **Run**, and type
`D:\autorun.exe` (where **D** is the letter of your CD-ROM drive) and click **OK**.
3. Click **Next** to install the driver for the Remote Control.
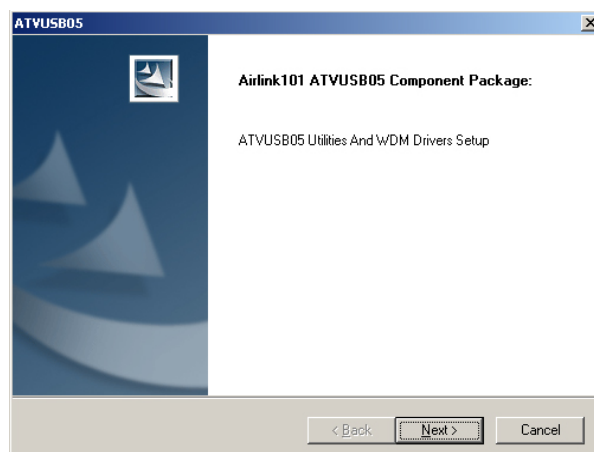

4. Click **Next** to install the driver for the TV box.

5. Click **Next** to launch the TVSetup utility.

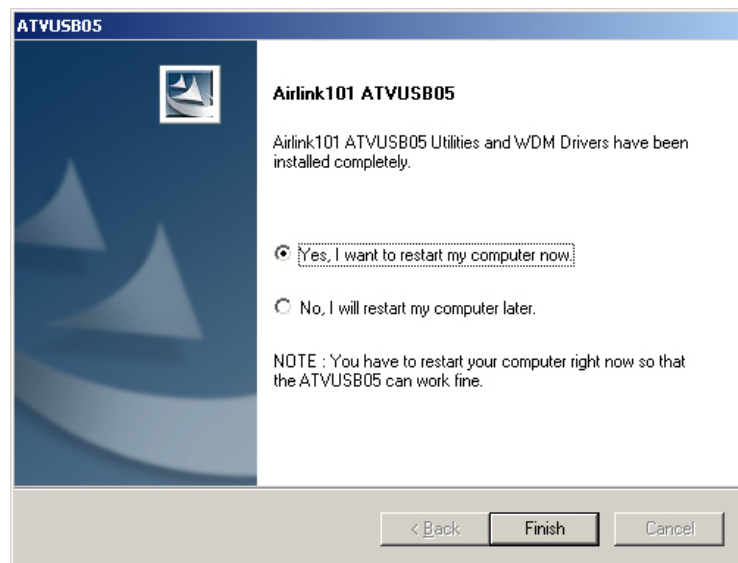

6. Click **Country** to configure the setting.

7. For U.S.A., select one of the following.

8. Unplug the USB 2.0 connector from your computer, re-plug the connector, and click **OK**.

9. Select **Yes, I want to restart my computer now** and click **Finish** to restart your computer.

Note: If you want to re-configure the TV system, you can run the "**TVSetup**" utility to change the setting. Click **Start**, **Programs**, **Airlink101**, **ATVUSB05 Utilities**, **TVSetup** to execute the program.

CHAPTER 3 INTSTALLING PVR PLUS

PVR PLUS is a set of utilities that allow you to watch TV on your computer, edit video clips, burn DVDs, and more. Before installation, it is highly recommended that all background applications such as antivirus software and system monitoring programs be disabled first.

1. Insert the provided Installation CD.
2. Select **PVR PLUS** at the setup menu. If the setup menu does not appear automatically, go to **Start**, **Run**, and type D:\autorun.exe (where **D** is the letter of your CD-ROM drive) and click **OK**.

3. Click **Next** to begin installation.
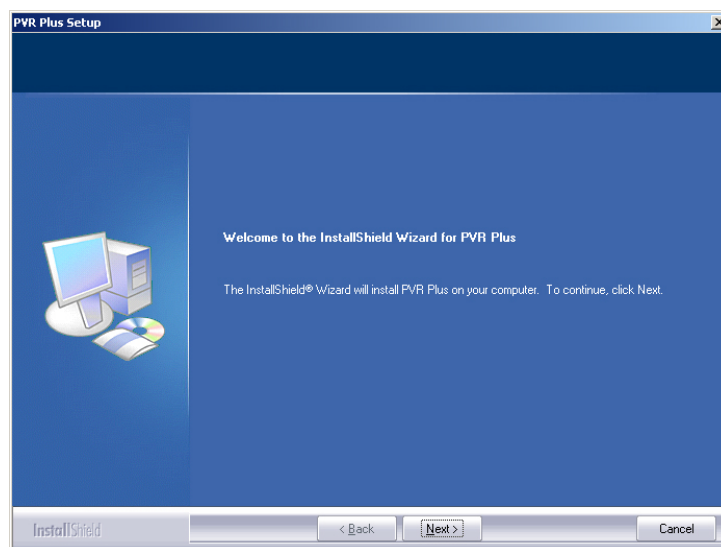

4. Click **Next** to accept the default Destination Location or click **Browse** to choose a new location.
5. Click **Next** to accept the default Program Folder.

6. Click **Finish** to complete the installation.

CHAPTER 4 USING PVR PLUS

Double-click the PVR Plus icon on your desktop to run PVR PLUS. After you started PVR PLUS, you can select the application you want to use. Click on each icon to start the application.

- **TVR**: TVR turns your PC into a full-featured video recorder. (For detailed instructions, please refer to chapter 5).

- **MPEG Encoder**: MPEG Encoder converts DV/AVI files into MPEG/DVD format. (For detailed instructions, please refer to chapter 6).

- **Video Editor**: Video Editor allows you to edit MPEG/DVD videos. (For detailed instructions, please refer to chapter 7).

- **DVD Maker**: DVD Maker lets you create VCD, SVCD, and DVD that can be played on a PC or DVD player. (For detailed instructions, please refer to chapter 8).

Note: You can also view and edit pictures using PVR Plus. For detailed information about how to view/edit the pictures, click the **?** button on the PVR Plus console.

CHAPTER 5 USING TVR

TVR is a powerful and easy-to-use TV application that provides feature-rich video/audio entertainment. TVR allows you to watch and record TV or video on your computer and playback the recordings as well.

5.1 Setting TV system and scanning channels

Note: The first time you start TVR, it will run the **TV Frequency Table Setup Wizard**.

1. For U.S.A., select **Country** and then select one of the following
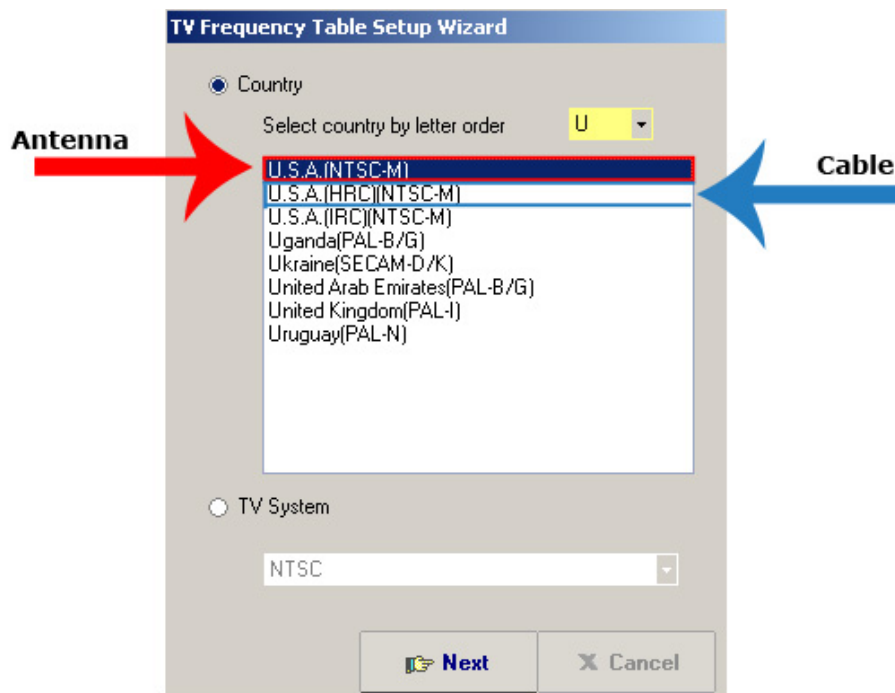

2. Select the **cable type** and **audio source** for your TV and Recording sound and click **Next**. For example, if you connect the provided audio cable to Line In of your sound card, then you would choose Line In as your audio source.
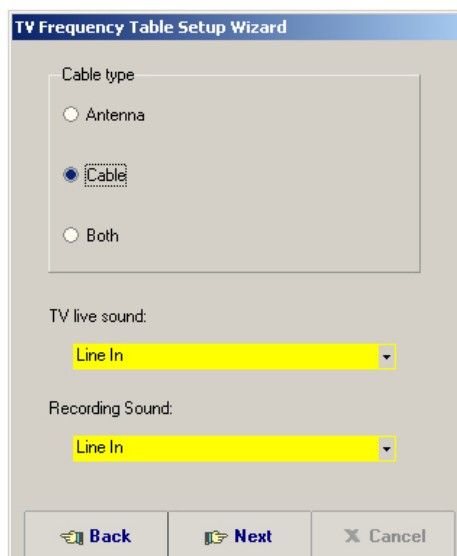

3. Click **Start** to auto-scan for all available channels.
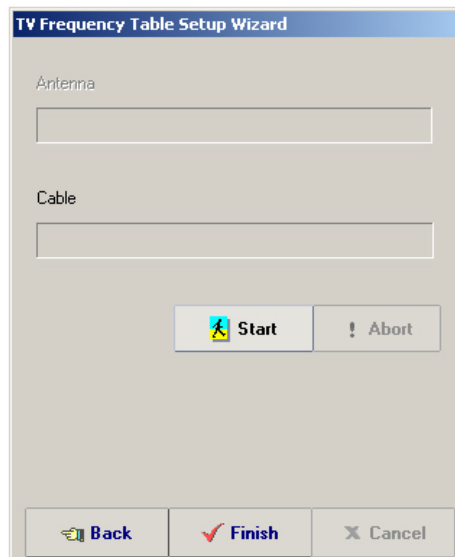

4. Click **Finish** to complete the **TV Frequency Table Setup Wizard**.
Note:

1. TVR depends on current country codes provided by Windows OS to give you a default value of each country. However, this may not work in some cases so you should check and select a valid option for your TV system; otherwise you will not be able to view all TV programs.
2. When you want to reconfigure your current TV frequency table, you can choose **Reset TV Option** on the popup menu of the display window.

5.2 Main Panel Functions

The display window shows live TV or recorded videos. You can drag it anywhere on the screen or adjust its size by double-clicking it to switch to full-screen and double-clicking the screen again to return to its original size. The TVR has six major parts.

5.2.1 Information Window

The Information Window displays the current status of the TVR, including video status, (Live, REC, Playback, Time Shifting) sound status, (Mono, Stereo, or SAP), recording time, recording file size, and the current time.

5.2.2 Basic Tool Part

The Basic Tool has seven buttons. You can click on each button for more specific functions. For detailed instructions on each button, please refer to the following sub-sections.

Antenna : Input source switch: click on this button to switch your video source

🕐 : Scheduling: schedules recording date/time

: Setup: opens the TV Setup Utility

🔍: Channel preview: previews all available channels

📷: Snapshot: takes a snapshot of the current image in the display window

↦➤: Sleeping timer: configures the sleeping timer

((•)): TV sound switching: select from Mono, Stereo, or SAP (for TV only)

5.2.3 Channel Adjust Part

You can select the channels by clicking the number keys , or on your computer's keyboard when the video source is set to Antenna, Cable, or Memory. You can also select the channels with the remote control.

Note: The remote control requires two AAA batteries (not included).

Channel Up : Goes to previous channel
Channel Down : Goes to next channel

Note: You must first set the channels by auto-scanning for them as described in section 5.1 before you can switch the channels.

Recall Channel : Returns to the last selected channel

5.2.4 Input Source Part

There are five video input sources to choose from: Antenna, Cable, Memory, Composite, and S-Video. You can change the video source by clicking on the video source switch button (like or **Cable**), or choose **Switch Video Source** from the popup menu of the display window. When the video source is changed successfully, the Input Source Switch will show the corresponding source.

5.2.5 Volume Adjust Part

Volume adjusting:

: Increase volume

: Decrease volume

: Mute or restore sound

5.2.6 Record, Playback, TimeShifting Part

1. **Record**

At Live mode, you can start recording the current broadcast by clicking on the capture button
. Once you are capturing, click the stop button to stop recording. You can review your recorded files in the **Play list** after recording.

2. **Playback**

You can playback the recorded files by clicking on the play button . A playback dialog box will appear, showing all the captured files and recently played files. Select the files you want to playback and click **Add** to add them to the **Play list**. You can add more than one file at a time, and you can also import files from other locations. Once you have added all the files to the **Play list**, click **OK** to begin playback.
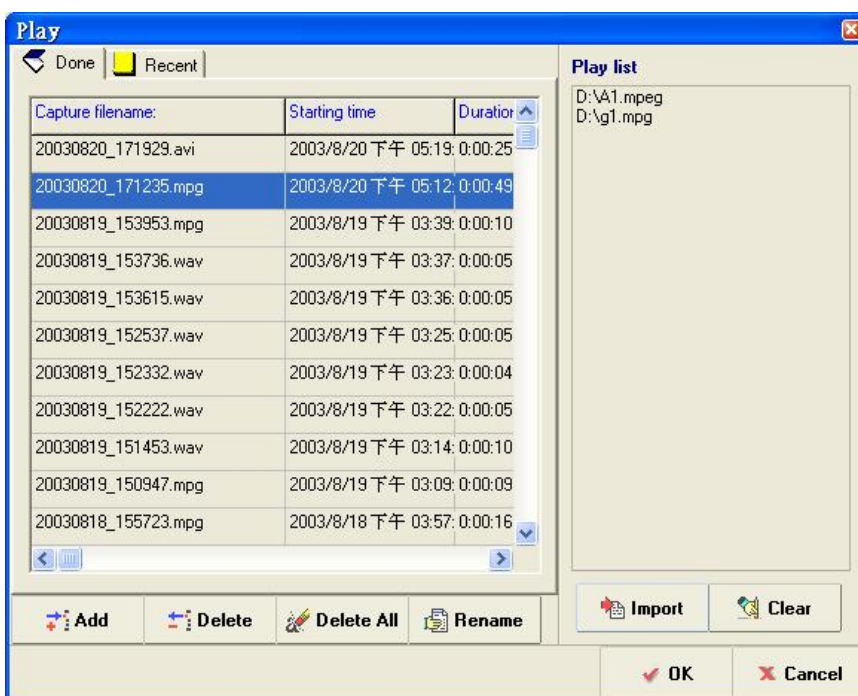

While playing, you can use following functions:

- **Play button** : If the video is paused, resume playback

- **Pause button** : If the video is playing, pause it

- **Stop button** : Stop current playback and go to Live mode

- **Backward button** :   Go backward

- **Forward button** : Go forward

14
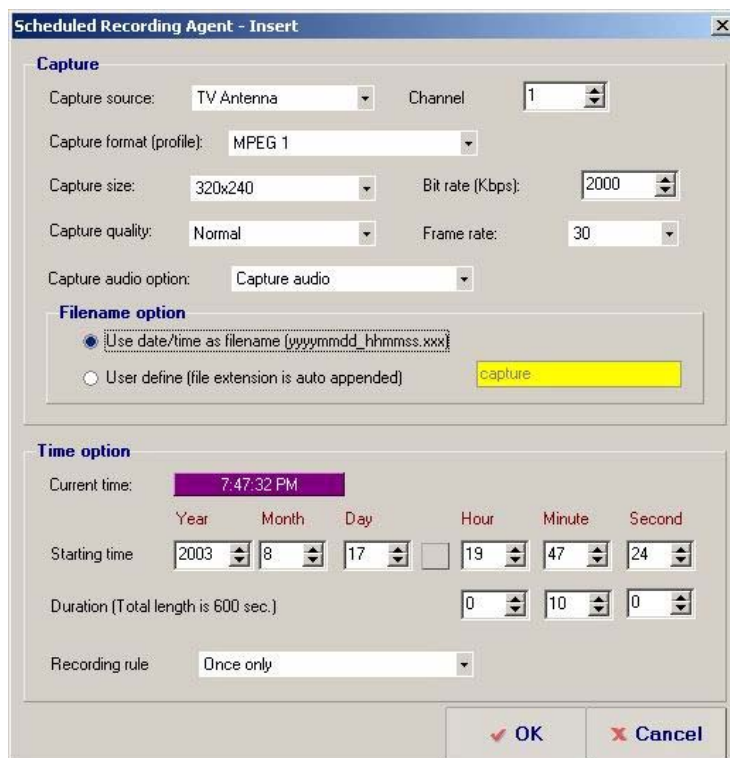

3. **Time Shifting Function**

The Time Shifting function allows you to record and playback videos at the same time. At Live mode, you can perform time shifting by clicking on the time-shifting button . Once you are in time-shifting mode, you need to wait at least 10 seconds before you can playback the recorded video by clicking on the play button . If you want to stop time-shifting, click the stop button . During time-shifting, you can switch between the current video and the recorded video by selecting **Real Screen** from the popup menu of the display window.

5.3 Schedule Function

Click on the Schedule button to configure the Scheduled Recording Agent. Click **OK** when you are done configuring.

Capture

Capture Source: Select the video input source (Antenna, Cable, Memory, Composite, or S-Video).
Channel: Select the channel that you want to record.
Capture format (profile): Select the video format you want to use. **Note**: If you want to burn your captured videos to DVD, be sure to set the capture format to **DVD (NTSC)** and not **MPEG 2**.
Capture size: Set the video capture size.
Bit rate (Kbps): Set the capture bit rate.
Capture quality: Set the capture quality.
Frame rate: Select the frame rate.

Capture audio option: Select from "**Capture audio"**, "**Capture audio only, No video"**, or "**No audio"**.

15

File name option: You can use the date/time as your capture file name or assign a name yourself.

Time option
Current time: Shows the current time.
Starting time: Enter the date and time when you want to start recording.
Duration: Enter the length that you want to record.
Recording rule: Select the recording rule you want to use. The default is "Once only."

When you enter a record schedule, it will be added to the **Open** tab of the Scheduled Recording Agent.

Insert: Insert a new record schedule.
Edit: Edit the record schedule.
Delete: Delete a record schedule.
Delete All: Delete all record schedules.
Execute TVR: Starts the TVR program.
Today To-do List: displays all of today's record schedules. Click **Refresh** to update the list.
Log: If your record schedule has failed, the error message will be recorded in the Log. You can check for any message in the Log. Click **Clear** to clear the log.

16
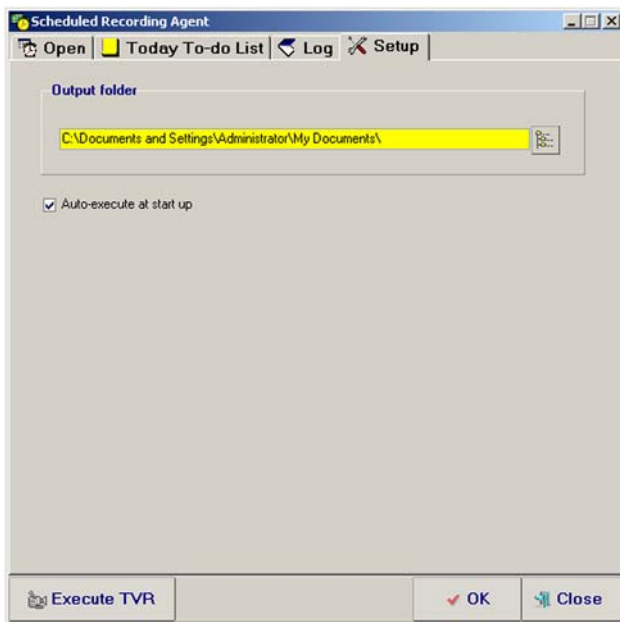

Setup:

Output folder: Assign a destination folder to store your scheduled recorded files.

Auto-execute at start up: Allows the Scheduled Recording Agent to start at Windows start up. Default is enabled.

5.4 Setup Utility

Click on the Setup button 🚚 to enter the Setup Utility.

5.4.1 TV Tuner

The TV Tuner tab allows you to customize and configure your TV channels or edit your favorite memory channels. You can auto scan your cable or antenna signals for any available channels, or you can label and identify your favorite channels as well as include or exclude channels from the channel list. In the channel list, you can double-click on each column to change channel settings, like video standard, MTS option, channel name, and frequency fine tune.
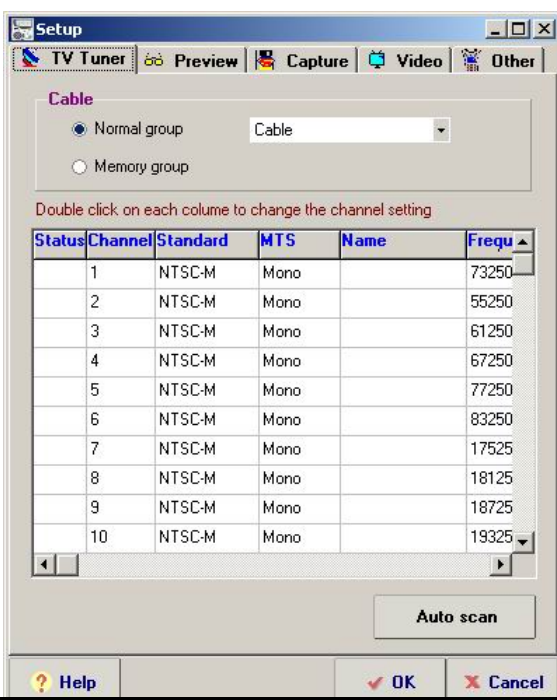

Normal Group: Switch TV source to Antenna or Cable.
Memory Group: In Memory mode, you can assign each channel with a memory number and exclude the channels you don't want to watch.
Auto Scan: Starts to auto scan for all available channels.

17

5.4.2 Preview
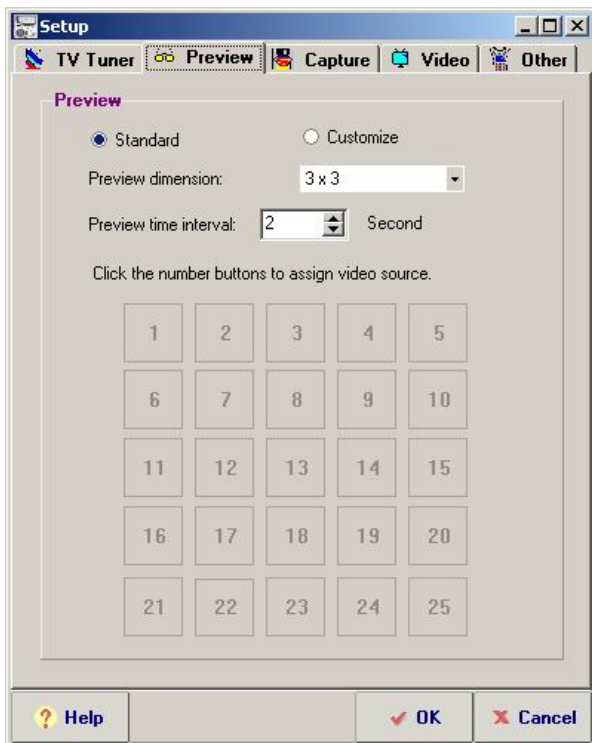

The Preview tab allows you to customize and configure your preview settings.

Standard: Follows the standard channel order
Custom: Allows you to set the video source of each channel. Click on the numbers below and set your video source.
Preview dimension: Select from 2x2, 3x3, 4x4, and 5x5.
Preview time interval: Set the time interval between each preview.

5.4.3 Capture
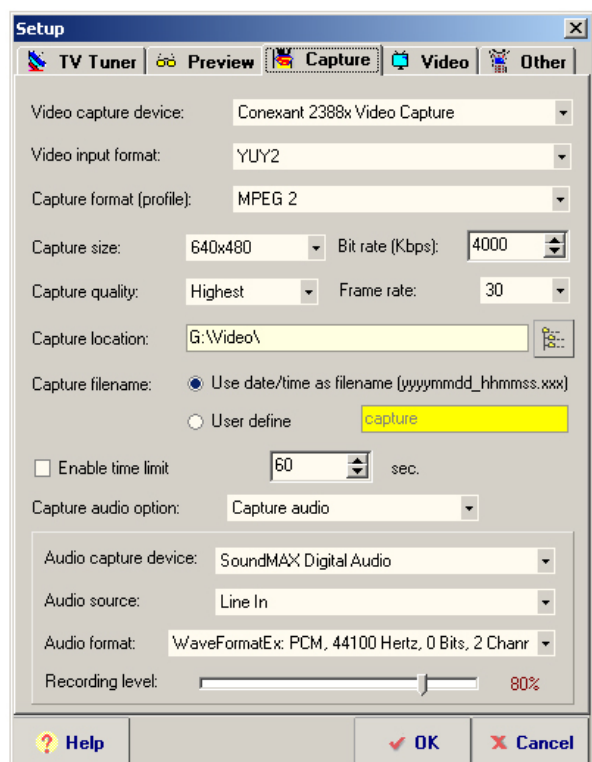

Video capture device: Select your video capture device.
Video input format: Select your video input format (UYVY, YUY2, RGB24).
Capture format (profile): Select the video format you want to record as. **Note**: If you want to burn your captured videos to DVD, be sure to set the capture format to **DVD (NTSC)** and not **MPEG 2**.
Capture Size: Set the video capture size.
Bit Rate (Kbps): Set the capture bit rate.
Capture quality: Set the video capture quality.
Frame Rate: Set the capture frame rate.
Capture location: Set the folder to store your captured videos.
Capture filename: Set the capture file name format. Choose either to name the files with date/time or as a custom name defined by you.
Enable time limit: Check this box to set a time limit for the video capture.
Capture audio option: Select from "**Capture audio"**, "**Capture audio only, No Video"**, or "**No audio**".
Audio capture device: Select the audio capture device you want to use.

18

Audio Source: Select the audio input source. (Recommended using Line In)
Audio format: Select the audio format. For DVD, be sure to select 48000 Hertz.
Recording level: Adjust the audio recording level.

5.4.4 Video
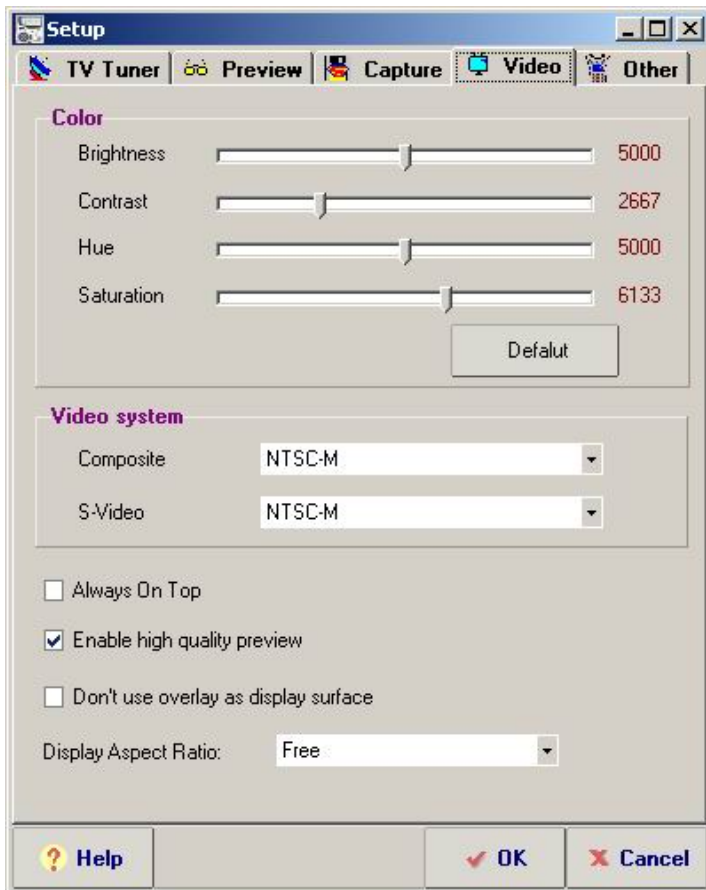

Color: Move the slide bar to adjust the **Brightness**, **Contrast**, **Hue**, and **Saturation** of the video. Click **Default** to reset the settings to factory default.
Video System: Select the video system for your Composite and S-Video inputs.
Always on Top: The preview window will always be displayed on top of other windows.
Enable high quality preview: Enables high quality preview mode.
Don't use overlay as display surface: If your VGA card doesn't support Overlay mode, click on this option.
Display Aspect Ration: Set the display aspect ratio to 4:3, 16:9, or free mode.

5.4.5 Other

Multi language option: Select the language for the user interface.

Enable PIP playback: Enables Picture-In-Picture function when you playback recorded videos.

MPEG4 Codec: Select the appropriate MPEG4 codec to use while capturing videos in the MPEG4 format. (Choose from DivX, Microsoft MPEG4 Codec V1, V2, and V3).

5.5 Channel Preview

You can preview all the channels by clicking on the Channel Preview button 🔍.

While previewing, you can select each channel sub-window with the 4 arrow keys (left, right, up, down), or directly clicking on it with the mouse. When you want to finish previewing, you can double-click on the sub-window you want to watch.

5.6 Snapshot

You can take a snapshot (still image capture) of the current image in the display window by clicking on the Snapshot button 📷. When the image is taken, the snapshot window will appear. You can view, save, and delete the images. The save image option supports Bitmap and JPEG formats. You can select which format to save the image as when you click **Save** or **Save All**.

Note: The snapshot button on the Airlink101 TV box only works with programs that support the TWAIN function. For more information on how to use the TV box's snapshot button, please refer to the FAQ in Chapter 9 of this manual.

5.7 Sleeping Timer

Activate the sleeping timer by clicking on the Sleeping Timer button ▸.

Use the slide bar to adjust the time before auto shutdown, click **OK** to start, **Cancel** to exit.

20

CHAPTER 6 USING MPEG ENCODER

The Mpeg Encoder lets you convert DV/AVI files into MPEG/DVD format.

6.1 Interface Explanation

Below is the interface window for the Mpeg Encoder:
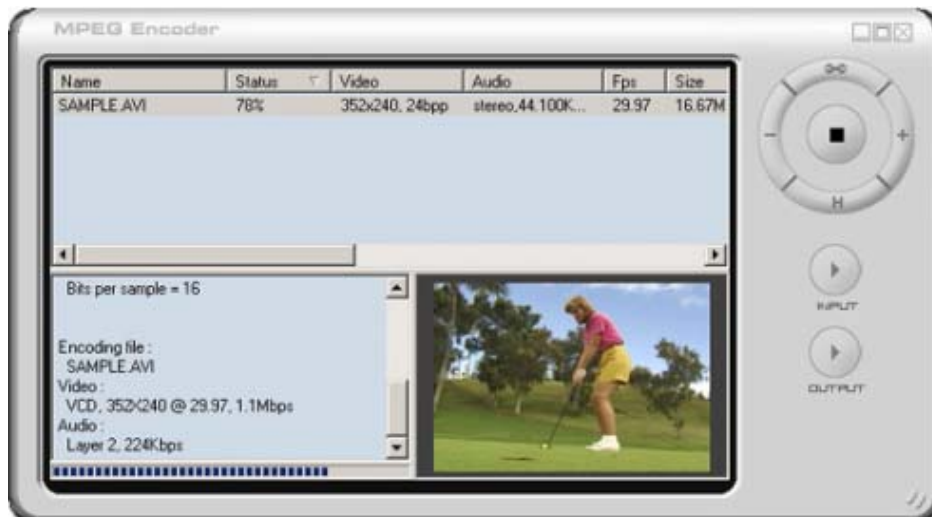

The interface window is composed of four parts:

Header Buttons (Upper Right)	Add files, delete files, Edit options, Start and Stop encoding, Help files.
Batch Process Display Window (Upper Left)	Displays the file name, encoding status, screen size, audio format, and play time of the files to be encoded.
Progress Display Window (Lower Left)	Displays formatting information about the file being encoded.
Preview Display Window (Lower Right)	Displays the video of the file being encoded.

6.2 Streaming Video Translation

MPEG Encoder converts multimedia files into MPEG/DVD format. For multimedia files to be encoded using the MPEG Encoder, they must be able to be played with Windows Media Player. File formats that can be converted are: AVI, DV-AVI, MPEG 1, MPEG 2, ASF, WMV, DivX, and DAT.
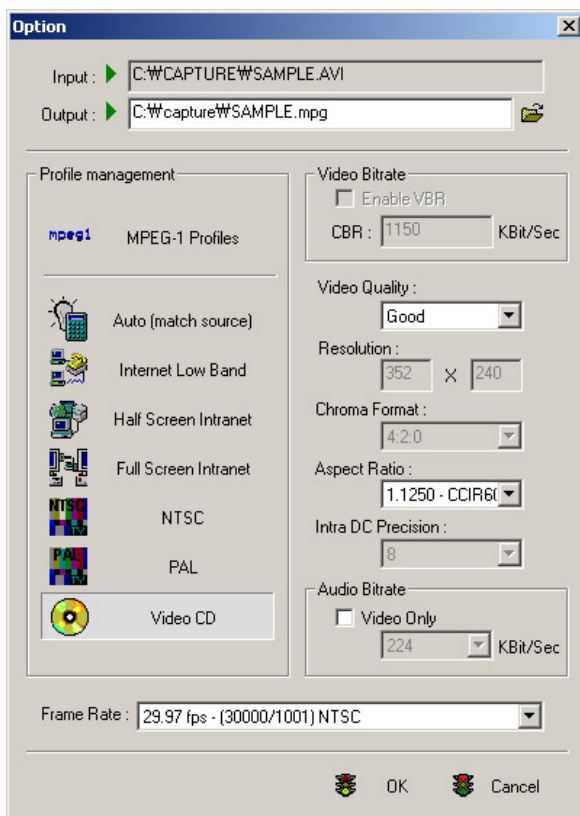

To add a multimedia file to be encoded, click on the + or **Add** button. This will open the Browse dialog box. Browse to the desired directory/file and click **Open**.

Once the multimedia file is added to the Batch Process Display Window, the Option Selection Dialog Box appears. Select to encode the file as Mpeg 1 or Mpeg 2. For more information, refer to the **Translation Option Dialog** Section 6.3.

The output file will be created in the same directory as the original file unless a different path is specified in the **Output** field. It will also maintain the original video file name and add a file extension matching the video format of the output type selected. The file name can also be changed manually.

6.3 Translation Option Dialog

When a media file is added to the Batch Process Display Window, the Option Dialog Box will appear. Choose one of the formats and click on **OK** to continue.
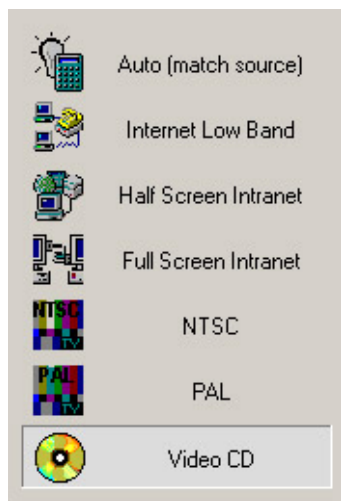

The MPEG-1 menu includes 7 profiles to choose from. Each profile displays the video bit rate of that format.

The Following list explains each profile:

|	
Auto (match source)	Calculates the most appropriate bit rate according to the screen size of the translating file
Internet low band	256Kbps, QCIF(160*120), 23.976frame/sec, QCIF(Quarter CIF)
Half Screen Intranet	384Kbps, QCIF(160*120), 23.976frame/sec, QCIF
Full Screen Intranet	768Kbps, CIF(320*240), 23.976frame/sec, CIF(Common Intermediate Format)
NTSC	Create MPEG file suitable for NTSC of American color TV broadcasting
PAL	Create MPEG file suitable for PAL of European color TV broadcasting
Video CD	Create MPEG file suitable for creating video CD
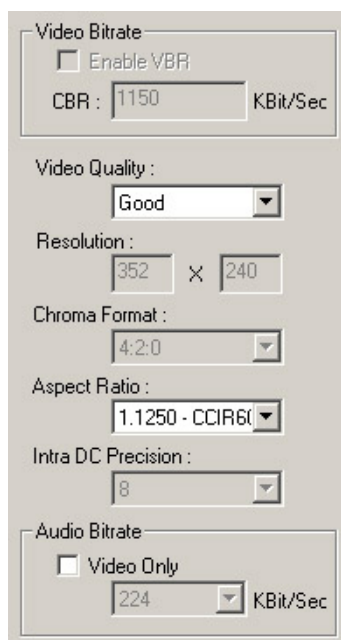

An inverse relationship exists between bit rate and compression. As the bit rate increases, the screen quality gets clearer, but the compression rate drops. If "**Auto (match source)**" is selected, the application will pick the optimized bit rate with respect to screen size. (**Note**: MPEG 1 & 2 formats have "**Variable Bit Rates**", that is, bit rates that can be adjusted). Selecting "**Enable VBR**" lets the application automatically compress the video while maintaining satisfactory screen quality within the maximum bit rate. Adjustments for video quality, resolution, format, aspect ratio, and Intra DC Precision can be manually set.

The MPEG-2 menu includes 7 profiles to choose from. Industry standard MPEG 2 DVD and SVCD profiles are included. Variable bit rate override can be manually selected.

HP @ H-14	
HP @ ML	
MP @ HL	
MP @ H-14	
MP @ ML (DVD)	
MP @ LL	
MP @ ML (SVCD)	

The Following list explains each profile:

HP@H14	80Mbps, 1440*1152 (High Profile at High-1440)
HP@ML	20Mbps, 720*576
MP@HL	80Mbps, 1920*1152 (Main Profile at Main Level)
MP@H14	60Mbps, 1440*1152
MP@ML (DVD)	Encode MPEG files suitable for creating DVD. Default 6Mbps
MP@LL	4Mbps (Main Profile at Low Level)
MF@ML (SVCD)	Encode MPEG files suitable for creating SVCD. 2.5Mbps

MPEG 1 & 2 profiles create audio files that are MPEG 1, Layer 2 in specification with bit rate choices of 128 Kbit/sec and 224 Kbit/sec.
Video only: When selected, the encoder will only encode the video and not the audio.

Once the output video format and options are specified and the **OK** button is clicked, the file will appear in the Batch Process Display Window.

The Batch Process Display Window shows the status of the media file in the Status column.

1. **Waiting**: the media file is queued and ready for encoding. Click on the encoding button to begin encoding.
2. **Exclusion**: the media file will not be encoded.
3. **Done**: the media file is successfully encoded.

To change a file's status between Waiting and Exclusion (and vice versa), double-click on the file name. The Waiting status will change to Exclusion and be reported as "**Skip**". Similarly, a file with a "**Skip**" status when double-clicked, will change to "**Waiting**."

When a file is in the Exclusion (Skip) status, you cannot encode the file. Double-click the file name to change the status to Waiting.

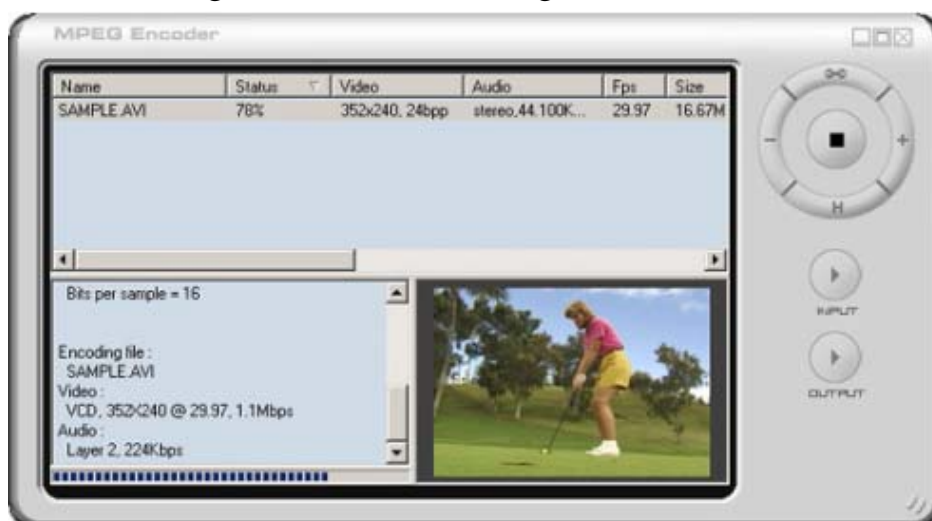

During Encoding, the Status column displays the percentage of progress. Once the encoding begins, the Encoding button changes to a Stop button. If the Stop button is clicked during encoding, the process will stop.
To view the encoded output video file, highlight the video file and click on the **Output** Play button.

CHAPTER 7 USING VIDEO EDITOR

The Video Editor lets you edit and merge your videos and save them as new video files.

The Video Editor's interface contains the following areas:

- **Menu Area:** add/delete files, minimize/maximize window, exit, and help files.
- **Display Area:** play original video clips (left screen), play edited video clips (right screen), display saving progress information.
- **Video Clip Staging Area:** Original Clips (top), Staging Clips (bottom).
- **Frame Edit Area:** mark frame range, sequence arrangement, and merge multiple frames into one video.
- **Title Edit Area:** add title, font style, size, color, movement (straight line, curve line)
- **Audio Edit Area:** add audio and create sound effect
- **Special Effect Edit Area:** use Color Effect, Filter Effect, Transition Effect, Transition In Effect, Transition Out Effect, Noise Reduction Filter

7.1 Menu Area

Button Descriptions
 Click the +/Add button to open a file

- Supports MPEG 1 & 2 files (Video and Audio), AVI (DV-AVI).
- Select a file and click **Open**.

 Click the -/Delete button to delete the file icon in the Original Clips area. **Note**: If you check the **Delete File** check box, the actual file will be deleted.

 : Mpeg Properties Dialog

 Displays your input mpeg file properties

7.2 Display Area

Original Video Display Window (Left screen)

- Displays original video. (Double-click or drag-and-drop the original video into this display window).
- Videos in Staging Clips cannot be displayed in this window.
- In Title editing mode, Title can be edited in this window.
- In Audio editing mode, it displays registered audio files.
- In Special Effect mode, it displays all available filters.
- Displays the progress information when <u>final video is created</u>.

Edited Video Display Window (Right screen)

- Displays videos in Staging Clips. (Double-click or drag-and-drop the edited video into this display window)
- Original Clips can be displayed in this window.
- Preview function displays edited video in this window.

7.3 Original and Staging Clips
Original Clips (Top)

- This is the area where video clips that need to be edited are added and managed.
- Video clips can be dragged and dropped into the Original Clips area.
- The sequence of video clips added can also be rearranged easily by dragging and dropping.

1.1 How to add video clips

- Use the ![ADD button] button in the menu area to browse and select video clips to add to the Original Clips area.
- Drag and Drop the video files into the Original Clips area.

1.2 How to view and manage video clips in the Original Clips area:

- To view a video clip in the Original Clips area, either double-click on the video or drag-and-drop the video clip from the Original Clips area onto the Original Video Display window.
- Clicking on the right mouse button will bring up a popup menu. This menu performs the following functions: copy, delete, and show property information.

Staging Clips (Bottom)

- This is the area where video clips are added after frame ranges are specified.
- Video clips can be managed for further editing in this area.
- Editing, deleting, and sequence arranging are done here.
- File properties for each video clip can be obtained by right mouse clicking on the clip.
- Edit the clips using the four application buttons on the left side of Video Editor: "**Cut**", "**Title**", "**Audio**" and "**Effect**".

7.4 Frame Edit Mode

1. Frame Range Selection for Editing

- Specify frame range
- To add an entire video clip, drag the clip from the Original Clips area and drop it in the Staging Clips area.
- To add portions of a video clip, drag the clip from the Original Clips area and drop it in the Original Video display window. Then using the Mark-in/Mark-out button, cut the portion of the video clip to be edited and then click on the cut button to transfer the clip to the Staging Clips area.
- Repeat the above steps to add multiple video frames.
2. Editing and Saving Video Clips

In the staging clip area, you can:

- Rearrange the sequence of videos.
- Repeat the same scene by putting the same video frames multiple times.
- Delete sections of video.
- Review the edited video before saving using the preview function.
- Repeat the above steps.
- Save the final video when editing is completed.

Note: For detailed information about editing the videos, click on the **?** button in the menu area for additional help files.

CHAPTER 8 USING DVD MAKER

The DVD Maker allows you to burn your videos into several video formats including DVD, VCD, SVCD, and DATA.

Note: The videos need to comply with proper specifications in order for the DVD Maker to burn them successfully. Please refer to section **8.3 Video Specifications** for more details.

8.1 Adding Files
1. DVD VCD SVCD DATA :

    Select the format you want to create:
    DVD: For DVD.
    VCD: For Video CD.
    SVCD: For Super VCD.
   DATA: For multimedia data CD.

2. Click the add button ▇▇+▇▇. Select the video files and click **Open**.

Note: Added files can be deleted. Click the delete button ▇▇—▇▇ to delete any unwanted file.

3. When all the files are added, click the next button **NEXT**.

31

4. Click **Next** to accept the default background image for your DVD Title page, or click **Background** BACKGROUND to choose an image. Click **Background** again after you have selected your background image and click **Next**.

8.2 Burning

If you wish to go back and modify your selections, click the back button BACK.

1. Select the DVD/CD burner to use.
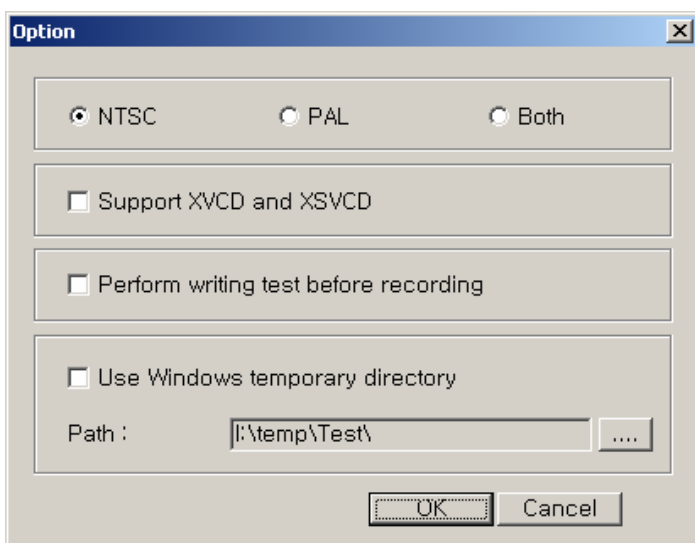

2. OPTION : Click the **Option** button to edit the options.

- **Select your video system**: NTSC, PAL, or Both

- **Support XVCD and XSVCD**: Data rate is not checked in order to support XVCD and XSVCD.

- **Perform writing test before recording**: Check to ensure that the DVD/CD burner is functioning properly before actual burning.

- **Use Windows temporary directory**: (Default) Uses Windows temporary directory as DVD Maker's temporary directory.

- **Path**: You can specify DVD Maker's temporary directory.

3. After selecting the DVD/CD burner and configuring the settings in the Option dialog box, click the next button **NEXT** to start burning the DVD or CD.

8.3 Video Specifications

In order for the DVD Maker to successfully burn the videos, the video files must meet the video specifications of the desired video format.

- **Digital Versatile Disk (DVD) Specs**:

  - NTSC:

    Size: MPEG2 720 X 480 pixels

    Video bit rate: Up to 9.8 Mbit/sec

    Frame rate: 29.97 frames/sec

    Audio: AC3, LPCM, MPEG-1 Layer2, 48 kHz

  - PAL

    Size: MPEG2 720 X 576 pixels

    Video bit rate: Up to 9.8 Mbit/sec

    Frame rate: 25.00 frames/sec

    Audio: AC3, LPCM, MPEG-1 Layer2, 48 kHz

- **Video CD (VCD) Specs**:

  - MPEG1 352 X 240 NTSC

    Size: MPEG1 352 X 240 pixels

    Video bit rate: 1150 kbit/sec

Frame rate: 29.97 frames/sec

Audio: 224 kbit/sec MPEG-1 Layer2

- MPEG1 352 X 288 PAL

Size: MPEG1 352 X 288 pixels

Video bit rate: 1150 kbit/sec

Frame rate: 25.00 frames/sec

Audio: 224 kbit/sec MPEG-1 Layer2

- **Super VCD (SVCD) Specs**:

- NTSC

Size: MPEG2 480 X 480 pixels

Video bit rate: max 2524 kbit/sec MPEG-2 (if the audio is in 224 kbit/sec), audio + video bit rate max bit rate is 2748 kbit/sec.

Frame rate: 25.00 frames/sec

Audio: from 32 - 384 kbit/sec MPEG-1 Layer2

- PAL

Size: MPEG2 480 x 576 pixels

Video bit rate: max 2524 kbit/sec MPEG-2 (if the audio is in 224 kbit/sec), audio + video bit rate max bit rate is 2748 kbit/sec.

Frame rate: 25.00 frames/sec

Audio: from 32 - 384 kbit/sec MPEG-1 Layer2

CHAPTER 9 FAQ

Q1: **How do I update my "USB 2.0 host controller driver"?**

A1: Please use our USB 2.0 update utility to update your USB 2.0 host controller driver. Put the provided Instllation CD into the CD-ROM drive, and the utility will automatically detect your USB 2.0 driver version. If your driver is the latest version, the following warning message will not appear. If your driver is not the latest version, you would see the following warning message. For step-by-step guide on how to update the driver, please refer to Chapter 1.3 of this manual.

A2: You can install the latest Service Pack to avoid seeing the update message:

For Windows 2000, please install Service Pack 4.
The Microsoft USB 2.0 driver is included in Service Pack 4 for Windows 2000. The driver is designated as **Microsoft USB Driver Version 5.1.2600.0.** You can get them at Microsoft's Windows Update web site.

**Q2: How do I use the snapshot button on the Airlink101 TV box?**

The snapahot button on the Airlink101 TV box only works with programs that support the TWAIN function. Some examples are Microsoft Word, ACDSee, and Photpshop.

The example below uses ACDSee v3.1.

1. Open the ACDSee software.
2. Click on the "**Acquire**" button. The Acquire setup window will appear
3. Under the TWAIN source option, select "**USB 2800 Video**". Configure your output settings and click **OK**.
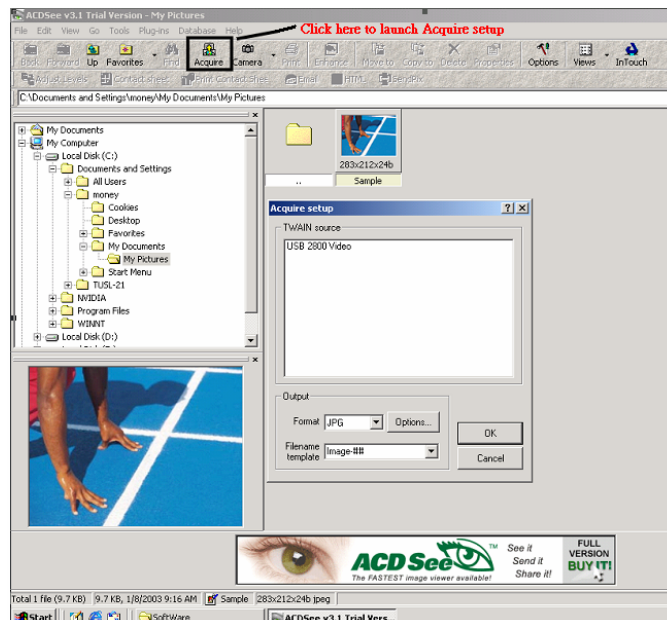

4. You will see the Still Image Capture window. Press the snapshot button on the TV box to capture the image.
Appendix A

Product Specifications

Key Features:

- Watch TV on PC
- Video Resolution: NTSC - 30fps @ 720 x 480
                    PAL   - 30fps @ 720 x 576
